

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

# INTRODUCTORY

---

This system is as nearly mnemonic as possible, intending to aid both the public and the library employes.

The classification system is arranged to fall in succession, each sub-class a relative part of the main class; it is divided into three parts—Class (A), sub-class (b), and a division (3).

Any person with an ordinary education and a small knowledge of books and their authors can find books, should the reader fail to supply either class letter or number, or both. Example: If a book on music is wanted the messenger will know that music is a fine art, Class F, and sub-class m (Music), where a guide card shows the numbered division wanted.

This system is more expansive than here represented, as not all the letters of the alphabet are used, leaving room for more classes, also a very few sub-classes or divisions are used up.

Books are classified: First, under subject; Second, by Author's numbered combination; Third, by initial letter of title of book. Example: Fiske, American Revolution; Hu. 44059 a; Subject Hu. sub-class, 4: Fiske, 4059; Initial letter of book, a; together making one shelf combination.

Biography is under the names of those written of, as Adams, Lincoln, Washington, sub-class, initial letter of the Author's name; Autobiography without sub-letter, see rule.

Use the correct name of an author and not the pseudonym, anonymous books are numbered under combination of the first word of title; Fiction alphabetically arranged under title of book, no letter or numbering used.

For the convenience of the public and to save confusion, the sub-letters k and n are substituted for L and o, as both these letters where index cards are typewritten appear as extra numbers l and o.

When there are several books with the same initial letter, as Da, De, Do, or in case of biography where there are more than one of the same initial as: life of Washington, by Seelye, Sparks, Stoddard, the following scale is used as, B, 9479, s-2; B, 9479, s-6; or B, 9479, s-8.

## SCALE OF SUB-NUMBERS.

|          |          |          |
|----------|----------|----------|
| A to C—1 | I to K—4 | R to S—7 |
| D to F—2 | L to M—5 | T to V—8 |
| G to H—3 | N to P—6 | W to Z—9 |
